

BSA Board Meeting MINUTES
November 18, 2022
Email Vote

On November 18th, the Board voted in favor of accepting all five submitted Symposia for Botany 2023.

1 - From theory to practice: new innovations and their application in conservation biology

2 - Seeing the network for the trees: Methodological and empirical advances in reticulate evolution*

3 - Standing your ground: understanding plant defense from molecules to morphology

4 - Whole genome duplications and impact on angiosperm character evolution

5 - The ploid thickens: methodological developments, empirical advances, and remaining challenges in polyploid phylogenetics*

There was also a recommendation to contact the organizers of Symposia 2 and 5 to see if there is too much overlap and if these Symposia should be combined or suggest the organizers work together to ensure there is significant differentiation between the two Symposia in topic and speakers.

There were no objections to any of the Colloquia submitted.
